HI THERE! I'AM EUGENE

web / UI / UX designer
product manager
analyst

—

I'm web / UI / UX designer from Kharkiv (Ukraine). My greatest strength is that I know well the full development lifecycle of a website – from idea to implementation.

Statistically, 95% of web designers just create nice images in Photoshop and neither take part in further implementation nor align their work with business goals of the client. In website development, the design itself is an intermediate stage, preceded by research stage, where the viability of project is evaluated.

I am the designer who can listen to his clients, structure their business goals and tasks, do the research, and offer well-grounded solutions.

I CAN HELP YOU IN THE FOLLOWING CASES:

·   You want to order a prototype or a design for the website / online store / web service.

·   You need a qualified web / UI / UX designer, who can guide a product from idea to implementation, being fully responsible for the interface.

·   You have an idea of the website / web service, but you don't have an understanding of how to organize it, what specialists are needed, and will the product be in demand.

- and in similar situations

SKILLS:

I am proficient in the following software products, technologies and processes.

ADOBE PHOTOSHOP	AXURE RP	HTML / CSS	OPENCART
WORDPRESS	SEO	ANALYTICS	COPYWRITING
